Congratulations and welcome to ownership of the new Char-Broil® RED®. It is our sincere hope that by reading this guide and with a little practice you will come to fully enjoy the tender juiciness and delicious flavor of food you prepare with the advanced RED® Infrared cooking system. We suggest you take a few moments to read the product guide to ensure your grill is assembled correctly and completely and that you are familiar with both the construction and operation before using your grill.

There are no hard and fast rules for cooking with your new RED® infrared grill – just some basic facts about how the grill works. Depending upon your level of experience with outdoor cooking on either traditional gas or charcoal grills you will discover we’ve designed RED® to be a useful tool for you to prepare great tasting meals the way you like and want. That’s why we say, “Infrared grilling that’s all about U”™.

The Char-Broil® RED® infrared grill has an exclusive infrared cooking system that gives you a wide range of control over the temperature and style of grilling, barbecuing and rotisserie cooking you enjoy. Plus having a convenient and versatile sideburner to complement your grilling experience makes RED® a complete outdoor cooking unit. Use this grilling guide as an introduction to get started cooking with your new RED® grill.

The most important thing you can do first is register your grill to activate your warranty and provide important information so that we can be more helpful when you need us. Please complete the warranty registration card found on the last page of your product guide or save a stamp and visit us at www.charbroil.com to register quickly and easily.

When you register online, be sure to sign up for our FREE email newsletter called Sizzle on the Grill. Each week you’ll get tips, recipes, party ideas and have the opportunity to enter great promotions and giveaways. We never sell or distribute your contact information. We want your Char-Broil® experience to be Great! – and this is one way we can stay in touch.
Visit www.charbroil.com
Now and Save 50%
on EVERYBODY GRILLS! Cookbook.

For 60 years, millions of folks have relied on the Char-Broil® name for great backyard cooking. Now Char-Broil® presents Everybody Grills®, a cookbook filled with everything you need to know to get outside and join the fun. You’ll find hundreds of recipes for grilling, smoking, low-and-slow BBQ, and frying a while turkey for the holidays - without oil!

There’s more including hundreds of easy-to-follow recipes for grilled and barbequed appetizers, main courses, salads, veggies, marinades - even deserts on the grill. Go to www.charbroil.com to order yours today!

WWW.CHAR BROIL.COM HAS A LOT TO OFFER INCLUDING:
• On-line grill registration • Exclusive on-line offers
• Free recipes and grilling guides • Sizzle On The Grill™ E-newsletter
• Customer support • Information on our full line of products
• And much more!
1) **Flavor for you.**
   - The 100% infrared heat sears in flavor and keeps foods moist and juicy, not dried out.
   - Simply drop wood chips through the grates and watch them start to smoke on the “U”.
   - A wide temperature range for intense searing at the cooking surface down to slow-and-low barbequing and rotisserie cooking.

2) **Simplicity for you.**
   - Porcelain cast iron grates require no seasoning, distribute heat evenly, and make cleaning easier.
   - With Char-Broil® RED® your food is never exposed to an open flame that can continually ignite food juices.
   - DualFuel™ equipped – conversion kit available to convert to natural gas. *(Available on certain models only)*

3) **Efficiency for you.**
   - Using one-third less gas, Char-Broil® has engineered these grills to cook better for you – and the environment.
   - Just turn the dial to CLEAN and brush any remaining food particles into the “U” for easy removal.
   - Electronic ignition at each burner for worry free lighting.
Getting started

First Time Use
Read your product guide and ensure the grill is put together properly.
Remove all Point-of-Purchase advertising material from all grill surfaces before first use. We recommend letting your grill cook on it’s highest setting for 15 to 20 minutes prior to your first use. (This is not needed for the side burner area.) This aids in removing the oils used during manufacturing.

Attaching your LP tank (check your product guide for complete info):
1. LP cylinder must be properly secured onto grill. (Refer to assembly section.)
2. Turn all control knobs to the OFF position.
3. Turn LP cylinder OFF by turning hand-wheel clockwise to a full stop.
4. Remove the protective cap from LP cylinder valve. Always use cap and strap supplied with valve.
5. Hold regulator and insert nipple into LP cylinder valve. Hand tighten the coupling nut, holding regulator in a straight line with LP cylinder valve so as not too cross-thread the connection.
6. Turn the coupling nut clockwise and tighten to a full stop. The regulator will seal on the back-check feature in the LP cylinder valve, resulting in some resistance. An additional one-half to three-quarters turn is required to complete the connection. Tighten by hand only – do not use tools.

Since 1995, all regulators (the part that attaches to the gas tank to regulate the flow of gas) have included a safety feature that restricts the gas flow in the event of a gas leak. You can inadvertently activate this safety feature without having a gas leak. This typically occurs when you turn on the gas using the grill control knob before you turn on the gas on LP tank valve. If the gas regulator safety feature activates, the grill will only reach temperatures between 250°F and 300°F even with all burners on the high setting.
If your grill is not getting hotter than 250°F to 300°F these steps should be taken first to reset the gas regulator safety device:

1. Open the grill lid.
2. Turn off all knobs on the control panel in front and sideburner knob (if equipped).
3. Turn off the LP tank knob.
4. Disconnect the regulator from the LP tank.
5. Wait 30 seconds.
6. Reconnect the regulator to the LP tank.
7. Slowly open the LP tank knob all the way. Do not put excessive force on the valve at the full open position to avoid damaging the valve.
8. Turn on the appropriate control knob and light the grill per the instructions.

An illustration of this process is included in the product guide or go to www.charbroil.com for more information.

Preheating Your Grill
Just like your home oven, the Char-Broil® RED® grill should be preheated to provide optimum performance. Preheat grill with the lid closed on CLEAN for 10 to 15 minutes - longer if weather conditions require. Then select your desired setting and preheat for another 5 to 10 minutes.

Please refer to the Lighting Instructions inside the product guide or inside the door of your grill if you have questions about how to light the grill. A match-light chain and access hole is provided for your convenience.

Auto-Clean™
Available only on certain models.

The innovative Auto-Clean™ feature allows for worry free grill cleaning without the hassle. After you are done grilling simply turn all of your main burners to CLEAN and set the Auto-Clean™ valve to CLEAN. The high heat generated from the burners will turn all remaining food debris and grease to ash and will automatically shut the grill off after 15 minutes. No longer will you have to remember to turn your grill off after burning it off, and no more empty tanks for those who forget to turn the grill off (you know who you are). When you return to the grill to put your grill cover on, turn all knobs to OFF, including the Auto-Clean™ knob, and you have a clean grill that’s ready to cook on again.
For detailed lighting and operating instructions refer to your Product Guide.

**Tips & Tricks**

- The Green LED will always flash while you are in the Clean cycle. If the light is not flashing, the Clean cycle has not been activated.
- If the Clean cycle fails to activate, simply press the Auto-Clean knob while it’s in the CLEAN position. This will engage it every time.
- If the Auto-Clean™ valve is in the OFF position the grill and side burner will not work. The Auto-Clean valve acts as a master valve and must be in the COOK position for the main burners and/or side burner to operate.
- In the case of a low battery the Red LED light will flash. The Clean cycle will still operate, however, it is time to replace your batteries.
- The device requires 2 AA batteries.
- If the batteries die, the Auto-Clean cycle feature will not work, however the grill will still operate in the COOK setting.
Digital Display Panel
Available only on certain models.

**Temperature °C/°F**: Unit offers the option of changing temperature to either Centigrade or Fahrenheit.

**Power/ BackLight**: To power the unit On/Off. Also, to turn On/Off the LCD Control Panel backlight for evening cooking.

---

**Gas Tank Gauge Indicator**
The LP Gas Cylinder has been split up into 5 equal capacity measurements, each of which measures approximately 20% of the entire cylinder (approximately 4.2 pounds each). Buzzer will sound when the level reaches the last 20% of fuel.

---

**Start/ Stop**: To Start the timer function during cooking or to stop the timer function.

**Down Temp/ Timer**: this button is used for setting the timer variable and decreasing the temperature set and timer. To set timer, hold this button down for 3 seconds.

**Up Temp/ Timer**: this button is used for setting up the temperature variable and increasing temperature set and timer. To set temperature, hold this button down for 3 seconds.

---

**Thermometer**
1. Temperature set-up value is from 0-499°C or 32-931°F.
2. When inputting temperature, if the buzzer sounds and LCD display begins to blink please re-set your temperature value ensuring that you have chosen the correct temperature measurement, and that the temperature is not set beyond the ranges shown in point 1.
3. When using the temperature probe always ensure that you are inserting into the thickest portion of the meat. If the buzzer sounds during use of the temperature probe this will indicate that either you have reached or gone beyond the set temperature. The buzzer will sound every 3 seconds.

See product guide for additional information on the Digital Display Panel
Infrared Grilling 101

Grilling with 100% infrared energy is quite simple. You’ll succeed with burgers, dogs or steaks usually on your first try. With experience, you will learn how to work with your grill, creating more imaginative meals all the time. This knowledge makes up the art of grilling.

This is Infrared
Infrared energy is comprised of those frequencies just beyond the visible light spectrum. Simply put, it is light that we cannot see, but our bodies (and food) detect as heat. Most electromagnetic energy can cause heating but infrared is the perfect choice for cooking. Traditional convection grills heat with hot air, and can dry out your food. With infrared grills, infrared frequencies strike the food and cause the molecules to vibrate, thereby creating the heat that cooks your food.

Cooking with Infrared Energy
- Sear marks are best made on fresh sections of the grill.
- Think about your meal and organize your food according to cooking techniques and required times as well as best use of the grilling area.
- Coat each piece of meat, fish or fowl with a light spray of high heat oil like canola.
- When using a sauce or glaze with excess sugars, brush on food during the final 10 minutes of cooking. Excess sugars will burn and turn to carbon and that’s not the smoke flavor you want! Keep in mind, use of excessive marinades will also require extra cleaning afterwards.

Until you get used to cooking on the Char-Broil® RED®, you may want to adjust your regular cooking times. If you are familiar with cooking on a well-prepared charcoal fire, your sense of timing will be more easily adaptable to the RED® Infrared cooking system. If you are use to cooking on open-flame gas burners, reduce the heat settings you normally use by at least 30% and the cooking time by about half. After some experience you’ll have a sense of what temperature setting and cooking times best work for you and deliver the results you want.

Cooking with Wood Chips
For added smoke flavor when grilling or barbecuing – wood chips can be placed directly into the “U” through the opening in the grates. No need to pre-soak, you can drop wood chips right out of the bag. NOTE: Do NOT place wood chips directly under greasy foods as this can increase the risk of flare up.

Here are some hardwood varieties that work particularly well with foods: Alder, Apple, Cherry, Grapevines, Hickory, Mesquite, Oak, Rosemary and Sassafras.
Preventing Flare-Ups

Your new RED® cooking system is inherently designed to avoid flare-ups; however, you can greatly reduce the chance of getting a flare up. Here are some suggestions:

- Wind forces oxygen between the grates which can result in flare-ups – try to keep your grill away from windy areas.
- When cooking fatty food on the searing or grilling settings 1) leave the lid cover in the open position and 2) use a lower temperature grill setting (as needed).
- If flare-ups do occur 1) move food from directly over the flare-up, 2) spray a steam of water from a hand spray bottle or pour a small amount of water into the “U”. Target the water away from the center of the “U” to create more steam to help extinguish a flare up, 3) cook with the lid open and 4) adjust the heat setting as appropriate according to the recipe.
- During cooking, if grease pools in bottom of “U” infrared emitter, remove food (if possible) and turn burners on with the grill lid open until grease has burned off.
- Do not place food directly over the gaps between the main “U” emitters. (Available only on certain models)

Direct Cooking

Infrared energy is perfect for direct cooking of steaks, chops and other meats as it can achieve very high searing temperatures. The infrared energy affects meat by first searing the outside and penetrating inside so the meat is cooked to juicy perfection.

Indirect Cooking

When indirect cooking with a conventional gas grill, food is generally placed away from the burner. With RED®, indirect cooking results are achieved by cooking on BBQ, and placing the food directly over the “U”. For a “U” with 2 burners underneath you can turn on only one burner to help control the temperature. Place wood chips or chunks in the “U” to add smoke flavors.

Rotisserie Cooking

Rotisserie burners are not needed with this grill. Simply use a Char-Broil® rotisserie over your Char-Broil® RED® Infrared cooking system with the grates removed. Always rotisserie on the Rotisserie setting as indicated on the burner control knob. Check frequently to ensure proper cooking.
**Searing**
Searing meat is all about creating a flavor “crust” and capturing internal juices so meat remains moist on the inside and every bite is delicious. Whether you’re grilling a steak with direct heat or slow roasting a pork shoulder, getting a good “crust” on the outside of the meat as soon as possible will help to ensure the flavor and the moisture remain inside. What is the crust? Natural proteins and sugars drawn to the surface of the meat react to temperatures in the “Searing Range” of 300°F and above. Searing creates what is also known as “The Maillard Reaction”. The RED® Infrared cooking system produces the perfect searing temperatures when infrared energy impacts the surface of the meat. Here’s a good searing tip for you to experiment with: Use a little coarse salt on your steaks, chops and roasts – this helps draw proteins to the surface of the meat – and when they get hit with the infrared energy this surface will sear and create that delicious crust you love to taste. On a turkey or chicken use a light touch of oil on the skin for the same effect. Sear the meat on the RED® infrared burner using a higher setting and then lower the burner setting to finish cooking. You may even want to use aluminum foil to “hold” cooked food on the warming rack as you prepare the additional courses.

**Grill or BBQ … what’s the difference?**
These words are often used interchangeable, but there is actually quite a difference. Grilling involves cooking your meat directly over high heat. Grilled foods are generally smaller pieces of meat and vegetables that make their way to the table faster. Barbequing is a slower way of cooking large portions of meat. It takes time, but your end result is tender and juicy. So grill it fast or ‘Q’ it slow… either route takes you to a mouth-watering meal.

**Grilling the Perfect Burger**
*Ground beef with a 20 percent fat / 80 percent lean ratio is best for a juicy burger with a good, meaty texture.*

- Form patties with gentle pressure and don’t over-pack.
- Form a slight depression in the middle of the patty so the edges are slightly thicker than the center. This will produce a less-round, more evenly-cooked patty.
- Patties should be no more than 8 oz. and ½ inch thick.
- Set RED® to Grill and cook for 3 to 4 minutes per side until the meat is no longer pink or when a thermometer inserted from the side to the center reads at least 160°F.
How to Grill a Succulent Beef Steak

Pick the right kind of steak. Tender cuts like sirloin, tenderloin, porterhouse, New York strip, and shell steak are the best. Fibrous steaks, like skirt and flank, also taste great grilled-especially when thinly sliced on the diagonal. Restaurant quality steaks are graded by the U.S.D.A. as either ‘choice’ or ‘prime’ and have not been frozen.

- The meat should be at room temperature, seasoned lightly with kosher salt (to help draw out the proteins in the meat) and ground pepper. Lightly oil the surface with canola or other high smoke-point oil.
- Set RED® to Sear and place the steaks on the grate, lined up in the same direction.
- Cook steaks on each side 2 to 3 minutes for a steak ½ inch thick, 3 to 4 minutes for a steak 1 inch thick or 4 to 6 minutes when 1-1/2 to 2 inches thick.
- Always turn the steak with tongs or a spatula; never use a fork. The holes made by a fork allow the juices to escape.
- To check for doneness you can use your finger pressed on the meat: rare meat moves easily when pressed with your finger while a well done steak is stiff; medium-rare is right in the middle. This is a skill that will develop with practice. You can also use an instant read thermometer inserted from the side of the steak, preferable through any fat on the edge and only when your experience suggests they are nearly done.
- Don’t overlook the last, most important step. Let the steaks rest for 2 to 3 minutes before you serve them. This allows the juices to flow back from the center of the meat to the exterior, giving you a juicer steak.
- Always cut meat across the grain to preserve tenderness.

There are more beef recipes at www.charbroil.com

How to Grill Tender & Moist Pork

Cooking pork to 160°F is considered safe and yields a much juicier piece of meat. One way to determine this, of course, is by using a meat thermometer. Depending on the thickness, cut, the grain of the meat and the amount of fat, muscle and bone, the cooking time for pork can vary considerably. Final cooking time to generate the proper internal temperature depends on the thickness of the meat and the heat of the grill.
Brining
Brining is a process similar to marinating in which meat (most often pork or chicken) is soaked in a salt solution (the brine) before cooking. Brining makes cooked meat more moist by hydrating the cells of the muscle tissue before cooking, and trapping water molecules, holding them during cooking. This prevents the meat from drying out.

Brine larger cuts of pork like shoulders, racks, roasts and even pork chops.

**Char-Broil’s EZ Basic Brine recipe is:**
- 1/4 cup kosher salt
- 1/4 cup packed brown sugar
- 4 cups hot water

Thoroughly mix all the ingredients and allow brine mix to cool. Place meat in an appropriate sized sealable plastic bag then cover with brine. Place in refrigerator for 4 to 24 hours depending upon size of meat. Remove and rinse, pat dry and allow to come to room temperature before adding rub or other seasonings.

Injecting Flavors
Flavors and moisture can be added by injecting meat with marinade solutions under cold conditions before cooking. Needle injectors are used to incorporate marinades directly into the thicker muscle pieces in meats. The brine or marinade is injected right where you need it.

Additional tips to help you prepare pork
- Use an instant read thermometer to check the internal temperature of the meat furthest from the bone and nearest to the center of the thickest part.
- As you near the end of the estimated cooking time, cut into the meat near the bone to determine doneness before pulling the meat off the grill. (A pork chop is cooked when the meat is no longer pink near the bone.)
- Brush glazes or sauces that contain any sweet ingredients like sugar or honey during the last few minutes of grilling to prevent them from charring.

Preparing Pork Ribs
There are several varieties of ribs and each requires its own technique to bring out the best flavors and textures. These tips are general rules to consider when cooking any pork rib.
• Before cooking apply a dry blend of herbs and spices to suit your tastes and compliment the flavor of the meat.
• Set RED® to BBQ.

**Important points to consider for grilling pork ribs with RED®:**
• Unlike other grills, the RED® grill emits 100% infrared energy. It will sear the outside, penetrating the meat and sealing it so the internal moisture will remain.
• Cook the ribs for 1/2 to 1 hour depending upon how much meat, bone and fat they contain. Baste the ribs with a light coating of apple cider vinegar during the last 10 minutes.
• If desired, you can brush on a glaze of barbeque sauce or marmalade during the final 10 minutes instead of the apple cider vinegar.
• Drop smoke chips directly between the cooking grates. They will flavor the ribs but not actually smoke them.
• Determining when pork ribs are done can be tricky and color is not an indication of doneness. Smoke from burning wood chips can turn the interior of the meat pink and leave you with the impression that it's not cooked. If you can move the rib bones back and forth without a lot of resistance the meat is cooked. A better judge is to remove the ribs after an hour and use an instant read thermometer inserted into the thickest part of the meat away from the bone, measuring for an internal temperature of 160°F.
• Infrared energy cooks differently than conventional gas or charcoal grills - the outside of the ribs will be crusty and the inside will be moist.

**There are more pork recipes at www.charbroil.com**

**Grilling Vegetables**

*Grilling gives vegetables a lightly smoked flavor and it doesn’t take much preparation. Here are several tips on grilling vegetables on the RED®.*

• Set RED® to Grill.
• We recommend you lightly brush or spray vegetables with olive oil before grilling to add flavor, promote sear marks, and keep them from drying out and sticking to the grill.
• Grilled vegetables are usually served as a side dish with other grilled foods, but they can also be served as a main course, drizzled with plain or flavored olive oil.
• In general, vegetables benefit from direct, high-heat grilling methods.
- Mushrooms and other small vegetables can be grilled whole. Larger vegetables just need to be sliced or cut into wedges.
- Start vegetables over medium-high heat to sear their skins, turning every 1 to 2 minutes. Then, move to low heat to finish cooking, turning occasionally.
- The easiest way to tell if vegetables are cooked is to pierce them with a fork or skewer. If it goes in easily, the vegetables are done.

*This chart is offered as a broad guideline for cooking times. Refer to times in individual recipes for more specific cooking times.*
Grilling Perfect Seafood
Grilling adds a light, smoky flavor to seafood and, like sautéing, also sears food - giving it a crisp, savory outer crust. Whole fish, firm-fleshed steaks, shrimp and scallops do well on the grill. Molusks such as oysters, clams and mussels are sometimes grilled in the shell and, although grilling causes the shell to open, it does little to actually enhance the flavor.

- Set RED® to ☀️ SEAR.
- To keep fish from sticking to the grill, make sure the cooking grate is clean and very hot before you start to grill. Rub it quickly with a paper towel dipped in a little high heat cooking oil before you put the seafood on the grill. A grill pan gives seafood a light smoked flavor and cooks it with virtually no fat.
- Whole fish such as snapper, pompano and sea bass must be handled carefully so they don’t stick and fall apart. Firm fish steaks such as tuna, swordfish and shark are particularly good on the grill because they hold together well and don’t stick.
- Grilled shrimp are tastiest when the shell is left on. Lightly sprinkle the shrimp with salt. Grill them about 5 minutes until the shells turn pink. Serve hot off the grill.

Grilling with a Plank
- Before you begin cooking with a plank it must be soaked. This helps to keep food moist while cooking, creates a more even cooking rate, and lends more of the flavor characteristic of the wood you have selected. Soaking a plank prior to cooking also reduces its burn rate and prolongs the life of the plank. Be sure to soak the plank prior to each cooking session, even if the plank has been used before.
- Many liquids such as, fruit juices, vinegar, wine and other alcohols can also be used although water is the most commonly used...
liquid for soaking. Immersing the plank in these different liquids renders their faint flavors into the food being cooked. Soaking times for planks should be at least one hour, but like marinating, can be longer based on personal preference. Also, the size and type of wood helps determine soaking times.

- Once the plank has been prepared by soaking in water or liquid of your choice, place it on the grill, cooking side down, and preheat the grill to medium for approximately five minutes. This allows the plank to dry. The plank should not be allowed to catch fire. Once the plank is preheated, brush a light coating of oil onto the cooking side of the plank. This seasons the wood and keeps the food from sticking.

Yes, Fruits are good on the grill too!
Lightly grilling fruit, especially stone fruits, caramelizes their natural sugars, enhancing their flavor and providing an attractive "grill mark".

- Set RED® to BBQ.
- Be sure to put fruits on a liberally oiled cooking grate to avoid sticking.
- Slice fruit in half and remove pits. Grill with pulp side down. Grill until tender. Turn only once.
- Grill the fruits until they are lightly browned. You want them to be tender but not mushy when gently pierced with a sharp knife. The key for grilling fruits is to use low heat or BBQ.
- Fruits don’t take long to cook on the grill (about 3 to 5 minutes). Thicker pieces of fruit, such as halved peaches or pears, may require a little more time. Thinly sliced fruit requires less time. Fruit can burn easily because of its sugar content, so watch it closely. Also, keep cooking times short for ripe fruit to prevent it from getting mushy.

Try these ideas for including grilled fruits in your meals:
Cut fruit, such as apples, pears, mangoes, pineapples and peaches into chunks and brush lightly with canola oil before grilling. Put pineapple slices or bananas sliced lengthwise directly on the grill. A touch of cinnamon or brown sugar to finish the grilled fruit is tasty!

Grilling Great Chicken Everytime
Grilled chicken is one of the most popular grilled foods. There are some simple steps you can take to ensure your grilled chicken turns out beautifully browned and cooked thoroughly while also remaining moist and tender.

- Consider brining the chicken pieces overnight. Brining adds moisture and tenderizes the meat (see page 13).
- Completely thaw chicken before grilling so that it cooks more evenly. Whenever possible, defrost chicken in the refrigerator. Defrost chicken in the microwave only if it will be immediately put on the grill. Chicken in airtight bags may be defrosted in cold tap water. Change the water every 30 minutes. Chicken
defrosted in the microwave or by the cold water method should be cooked before refreezing.

- Keep raw chicken and cooked chicken apart! Use a different platter to serve the grilled chicken from the plate that was used to carry the raw chicken to the grill. Also, either discard raw poultry marinade, or boil it for at least 2 minutes before serving it with cooked chicken.
- If you are packing for a picnic keep uncooked chicken in a cooler with ice or cold packs until ready to grill. The temperature in the cooler should stay below 40°F. If the day is hot, remember that chicken should not remain out longer than an hour after it is grilled.
- If possible allow the chicken to come up to room temperature prior to grilling. This should take only about 20 minutes. Grilling cold chicken will delay the overall cooking time and can result in an overcooked exterior with under cooked interior.
- When you grill chicken parts, remember that a different thickness will affect the grilling time and so will the fat content. As a general rule, white meat takes less time than dark meat, while breasts and thighs will take longer than wings.
- Set RED® to Grill and cook until a meat thermometer inserted into the thickest part of the meat reaches approximately 165°F. Be sure the thermometer does not touch the bone. The infrared energy of the RED® will lightly sear the outside of the chicken, skin or skinless, and help seal in the moisture.
- Be sure to remove the grilled chicken and cover it lightly with aluminum foil; then let it rest for several minutes as the internal temperature will continue to rise and the chicken will finish cooking.
- If you enjoy sauce or glaze on your grilled chicken, we recommend brushing it on lightly during the final 10 minutes of grilling.
- Consider using an Oklahoma Joe’s® dry rub (available online at www.charbroil.com) on the outside of your chicken up to 24 hours before grilling to enhance flavors.

There are more chicken recipes at www.charbroil.com

How to Cook with a Rotisserie

Rotisserie cooking is best for “round” foods, such as large roasts, whole poultry, and pork.

- On the Char-Broil RED®, the Rotisserie setting is designed to be the optimum infrared energy level for rotisserie cooking. Be sure the meat is centered over one of the “U” infrared emitters and remove grates under the meat before cooking.
Rotisserie cooking has its own set of simple rules:

• A rotisserie that turns at a constant speed allows the same degree of heat to cook every inch of the food. The food holds its moisture better than in an oven because the surface of the food sears quickly and therefore seals in natural juices.

• Marinate and baste with any combination of liquids, herbs and spices, but keep sugar ingredients to a minimum. Don’t baste with a sauce that has a high sugar content until the last 10 minutes of cooking to prevent the sauce from charring.

• As with grilling, many factors, such as wind, air temperature, humidity and the size and thickness of the food, affect the performance and actual cooking times of your rotisserie. Recipes can only give approximate cooking times.

• Keep the pieces of food, such as cut-up chicken, as equal in size as possible to ensure consistency in the cooking time. For larger food, such as a roast, make sure that the food is balanced on the spit rod before placing it over the grill.

• Poultry wings and legs, which may move around on the rotisserie, should be trussed or tied securely to the body with heavy cotton kitchen twine.

Checking for Doneness When Using a Rotisserie

There is no easy way to check for doneness with rotisserie grilled food. Stop the rotisserie motor and insert an instant read meat thermometer into the deepest part of the food. To avoid overcooking the food, check the temperature about 15 to 20 minutes before the final estimated cooking time. The temperature will rise more rapidly at the end of the cooking time than at the beginning. Unlike oven roasted food, rotisserie grilled food does not increase in temperature and does not continue to cook after it is taken off the rotisserie. However, all roasts should rest 5 to 10 minutes after cooking to allow the juices to settle and to make carving easier. When removing the rotisserie spit rod from the grill, always use hot mitts as the spit rod can get very hot.

Rotisserie Roasted Chicken

• Set RED® to Rotisserie.

• To be balanced, you want to make the chicken as round as possible, so truss the bird with kitchen twine. Cross the drumsticks and tie them together. Tie the wings together with another string from the first joint to the tips around the back of the chicken.

• Run the spit rod through the breast, parallel to the backbone. It will run out through the body opening. Make sure it is centered.

• Attach the forks on the spit rod to the breast and tail areas. Be sure the forks press tightly so the chicken is secure.

• Before you put it on the grill, roll the spit rod in the palms of your hands. It should turn easily, but if it is heavier on one side than the other, the bird isn’t balanced. Adjust the forks as needed.
Rotisserie Roasted Pork, Beef, or Lamb
With a rotisserie, roasts brown and self baste to perfection while you relax.
Follow these few simple instructions and enjoy!
• Insert the rotisserie rod lengthwise through the center of the roast.
• Adjust holding forks and test balance (uneven weight distribution can place unnecessary strain on the rotisserie motor).

Everybody Grills!® Cook Book
For 60 years, millions of folks have relied on the Char-Broil® name for great backyard cooking. Now Char-Broil® presents Everybody Grills!®, a cookbook filled with everything you need to know to get outside and join the fun. You’ll find hundreds of recipes for grilling, smoking, low-and-slow BBQ, and frying a whole turkey for the holidays - without oil!

There’s more including hundreds of easy-to-follow recipes for grilled and barbequed appetizers, main courses, salads, veggies, marinades - even deserts on the grill.

Go to www.charbroil.com to order yours today and receive 50% OFF. (Details on page 3.)

GRILLED TENDERLOINS WITH BLUE CHEESE TOPPING

2 tenderloin steaks, approximately ½ pound each
1 large clove garlic, halved
½ teaspoon salt
½ teaspoon fresh parsley, chopped

TOPPING
2 tablespoons cream cheese
4 teaspoons crumbled blue cheese
4 teaspoons plain yogurt
2 teaspoons minced onion
Dash ground white pepper

Combine topping ingredients in a small bowl. Rub steaks with garlic halves.
Place steaks on hot grill, and cook 8 to 11 minutes, turning occasionally. One to two minutes before steaks are done, season with salt; then top evenly with cheese mixture. Remove from grill; sprinkle with parsley; and serve.
GRILLED TILAPIA WITH SUN-DRYED TOMATOES

Preheat grill to medium-low. Mix together lemon juice, salt, pepper, and cilantro. Pour over fish in a flat dish. In a medium saucepan, mix together all remaining ingredients except for cream. Bring to a boil; then add cream. Remove from heat. Grill tilapia 8 to 10 minutes, turning once. Place on plate; cover with sauce; and serve. ♨️

1 teaspoon lemon juice
Salt and pepper to taste
1 teaspoon fresh cilantro, chopped
2 tilapia fillets (8 to 10 ounces each)
2 sun-dried tomatoes, juliened
1 medium tomato, diced
½ cup white wine
¼ red onion, diced
1 teaspoon fresh parsley, chopped
½ cup light cream
Cleaning Your Grill

Why Clean?
We’ve all heard the saying ‘An ounce of prevention is worth a pound of cure’. This is great advice when it comes to keeping your grill clean. Besides the high heat provided by 100% infrared energy emitted from the “U”, it also makes clean-up a breeze. There is no grease trap to clean on the Char-Broil® RED® - because there is no leftover grease!

Routine Care
Before and after each use it is advised that you burn off any excess grease and food debris that has accumulated on your grates or inside your “U”. If your grill is equipped with the Auto-Clean™ feature then refer to the information provided on page 6. For grills without the Auto-Clean feature, turn the main burner grill knobs to the Clean setting and close the lid of the grill. Leave it on for around 15 minutes and this should turn debris into ash. When preheating the grill leave the lid closed and this should also help to clean the grill. Occasionally you should remove the grates and burn-off the debris that builds up on the edge of the “U” where the grates rest. If any water or moisture has accumulated in the “U”, you can either remove the “U” and dump it out or burn it off prior to cooking.

Porcelain Cast Iron Grates
The Porcelain Cast Iron Grates should be cleaned regularly with a heavy-duty grill brush, such as the Brush Hawg® or Mega Brush Hawg®, available from your local Home Depot store or online at www.charbroil.com. You can also soak the grates in a mixture of water and vinegar for a deep clean.

The “U” must also be cleaned regularly
Remove the “U” from the grill and brush or dump out ash or debris. A soft brush or sponge can be used to clean it out. The “U” is coated with special highly emissive porcelain. Do not bang it or brush with a hard bristled brush to avoid cracking and damaging the surface. For a deep clean you can use a sponge with soap and water to clean the inside of the “U”.

Always coat the grates and “U” with a light coat of high heat cooking oil after cleaning. This added layer of protection will ensure your RED® infrared grill will be ready for your next grilling experience.
General Cleaning
• Plastic parts: Wash with warm soapy water and wipe dry. Do not use abrasive cleansers, degreasers or a concentrated grill cleaner on plastic parts. Damage to and failure of parts can result.
• Porcelain surfaces: Because of glass-like composition, most residue can be wiped away with baking soda/water solution or glass cleaner. Use non-abrasive scouring powder for stubborn stains.
• Painted surfaces: Wash with mild detergent or non-abrasive cleaner and warm water. The Char-Broil® grill cleaner is available at your local Home Depot store or online at www.charbroil.com. Wipe dry with a soft non-abrasive cloth.
• Stainless steel surfaces: Stainless steel can rust under certain conditions. This can be caused by environmental conditions such as chlorine or salt water, or improper cleaning tools such as wire or steel wool. It can also discolor due to heat, chemicals, or grease build-up. To maintain your grill’s high quality appearance, wash with mild detergent and warm water, or use a stainless steel grill cleaner. Baked-on grease deposits may require the use of an abrasive plastic cleaning pad. Use only in direction of brushed finish to avoid damage. Do not use abrasive pad on areas with graphics.
• You can minimize the need to clean the exterior of your grill by using a Char-Broil® grill cover that has been specially designed for your RED® grill. Choose from a variety of grill covers available at your local Home Depot store or online at www.charbroil.com.

Critters
Spiders like to make their homes in the venturi tubes of grills. These must be inspected and cleaned regularly to ensure there are no blockages. Refer to your product guide for complete information.

Storing Your Grill
• Clean the cooking grates and “U”.
• Store the grill in a dry location.
• When an LP cylinder is connected to the grill, store it outdoors in a well ventilated space and out of reach of children.
• Cover the grill if stored outdoors.
• When removing the grill from storage, follow the 'Cleaning the Burner Assembly’ instructions in the Use and Care section of the product guide.
• Never store an LP cylinder indoors.
Routine Service & Maintenance
Cleaning Schedule

Regular cleaning will do wonders in terms of prolonging the life of your grill. Go online to www.charbroil.com for the cleaning tips & tricks.
